

Core Lab Grant Program

CB
UTechS

10x Genomics, MacroGen and the CB UTechS are Sponsoring a Grant Program for Innovative Investigators within the Paris area

Description:

We are pleased to announce a pilot award in collaboration with 10X Genomics and MacroGen to provide library preparation for Single Cell Gene Expression, Single Cell Immune Profiling, or Single Cell Epigenomics. The Cytometry and Biomarker Unit of Technology and Service (CB UTechS) is offering a unique opportunity to support innovative pilot research projects using 10x Genomics Single Cell Chromium Controller.

The awardees will be able to perform library preparation for 2 samples under the supervision of the CB UTechS for single cell gene expression, single cell immune profiling or single cell epigenomics analysis. The program aims to support up to 4 pilot projects. Additionally, MacroGen will be supporting the sequencing associated to the libraries generated for at least the 1st and 2nd winning abstracts, utilizing the latest NovaSeq 6000 system. Applications will be reviewed within two weeks of submission deadline.

Objective:

The goal of this program is to support the researchers as they seek to generate pilot data to submit in support of future grant applications, and to promote the utilization of cutting-edge solutions from 10x Genomics for genomic and translational research.

Eligibility:

1. Applicants must hold a research positions within the Institute Pasteur or an academic institution in the Paris Area and must be planning to submit a grant application to support a broader research for which they need pilot data.
2. Applicants may not hold current awards directly related to the proposed research.
3. Young investigators are strongly encouraged to apply.

Apply:

Please submit your abstract (300 words max) by July 20th using the QR code below to be considered for this program.
